

Workflow:

Method overloading: `find(): Course` in User class  
`find(String fn, String ln): Student`

Method overriding: `display(): void` for Admin or Course Object  
`register(): void` for Admin or Student Object  
`viewCourse(): void` for Admin or Student Object  
`viewF(): void` for Admin or Student Object

Inheritance: Both Admin and Student Class inherit User Class

Polymorphism: `viewCourse(): void` for Admin or Student Object  
`viewCourse(): void` for User Class

Encapsulation: All instance variable or class variable in database are either private or protected
